Investment approach

- This Fund seeks to track the performance of the Index.
- In seeking to achieve its investment objective, the Fund aims to provide a return (comprising both income and capital appreciation) which, before application of fees and expenses, is similar to the return of the Index.
- The Fund employs a “passive management” – or indexing – investment approach, through physical acquisition of securities, designed to track the performance of the Index.
- In tracking the performance of the Index, the Fund will invest in a portfolio of fixed-rate bonds issued and/or guaranteed by the governments of euro zone member countries that so far as possible and practicable consist of a representative sample of the component securities of the Index.

About the benchmark

- The Index is a widely recognised benchmark designed to reflect the total universe of publicly traded, fixed-coupon, euro-denominated treasury securities with maturities greater than one year and which have a minimum issue size of EUR 300 million.

Key investment risks - The value of investments, and the income from them, may fall or rise and investors may get back less than they invested. The value of investments may fall or rise as a result of changes in exchange rates. ETF shares can be bought or sold only through a broker. Investing in ETFs entails stockbroker commission and a bid-offer spread which should be considered fully before investing.

Ongoing charges*

AMC/OCF*	0.12%
----------	-------

*The Ongoing Charges Figure (OCF) covers administration, audit, depository, legal, registration and regulatory expenses incurred in respect of the Funds. When you invest with any fund manager, you pay a number of charges, starting with the Annual Management Charge (AMC) which covers the fund manager's costs of managing the fund. The AMC plus ongoing running costs and other operational expenses make up the fund's total 'ongoing charges figure'.

Vanguard EUR Eurozone Government Bond UCITS ETF

An exchange-traded fund

Characteristics

	Fund	Benchmark
Number of bonds	133	346
Effective YTM	0.63%	0.62%
Average coupon	3.0%	2.9%
Average maturity	9.3 years	9.2 years
Average quality	A+	A+
Average duration	7.4 years	7.4 years
Cash investment	0.2%	—

Distribution by issuer (% of fund)

	Fund
Treasury	99.9%
Cash	0.1
Total	100.0%

Distribution by credit quality (% of fund)

	Fund
AAA	23.3%
AA	35.8
A	3.0
BBB	37.8
Less than BBB	0.0
Not Rated	0.1
Total	100.0%

Credit-quality ratings for each issue are obtained from Barclays using ratings derived from Moody's Investors Service, Fitch Ratings, and Standard & Poor's. When ratings from all three agencies are available, the median rating is used. When ratings are available from two of the agencies, the lower rating is used. When one rating is available, that rating is used.

Distribution by credit maturity (% of fund)

	Fund
Under 5 Years	40.8%
5 - 10 Years	26.4
Over 10 Years	32.8
Total	100.0%

Top country diversification

	Fund
France	24.3%
Italy	24.0

Glossary for ETF attributes

The ETF attributes section on the first page contains a number of metrics that professional investors use to value individual securities against a market or index average. These metrics can also be used to value and compare funds to the market by taking the average of all the securities held in the fund and comparing them to those of the fund's benchmark index. We've provided a definition of the terms used for your convenience.

Average coupon is the average interest rate paid on the fixed income securities held by a fund. It is expressed as a percentage of face value.

Average maturity is the average length of time until fixed income securities held by a fund reach maturity and are repaid, taking into consideration the possibility that the issuer may call the bond before its maturity date. The figure reflects the proportion of fund assets represented by each security; it also reflects any futures contracts held. In general, the longer the average effective maturity, the more a fund's share price will fluctuate in response to changes in market interest rates.

Average quality is an indicator of credit risk. This figure is the average of the ratings assigned to a fund's fixed income holdings by credit-rating agencies. The agencies make their judgment after appraising an issuer's ability to meet its obligations. Quality is graded on a scale, with Aaa or AAA indicating the most creditworthy bond issuers.

Average duration is an estimate of how much the value of the bonds held by a fund will fluctuate in response to a change in interest rates. To see how the value could change, multiply the average duration by the change in rates. If interest rates rise by 1 percentage point, the value of the bonds in a fund with an average duration of five years would decline by about 5%. If rates decrease by a percentage point, the value would rise by 5%.

IMPORTANT INFORMATION

The material contained in this document is not to be regarded as an offer to buy or sell or the solicitation of any offer to buy or sell securities in any jurisdiction where such an offer or solicitation is against the law, or to anyone to whom it is unlawful to make such an offer or solicitation, or if the person making the offer or solicitation is not qualified to do so. The information in this document is general in nature and does not constitute legal, tax, or investment advice. Potential investors are urged to consult their professional advisers on the implications of making an investment in, holding or disposing of shares of, and the receipt of distribution from any investment.

The value of investments, and the income from them, may fall or rise and investors may get back less than they invested.
